

# BAILOUT

**Political Satire Game Concept** by Aubrey Tennant – GD19

Bail Out is a hilarious political satire Flash game for download where the player controls the lower and middle class in order to manage the national debt. The players must direct the tiny workers to dig downwards through piles of money while avoiding obstacles (environmental disasters, corporate bailouts) and collecting books. Books boost education and act as multiply productivity. The more lower class you have the more diggers you will get to use. The more middle class you have, the more productive each digger is. All stats can be seen on a separate menu screen. Also, as the debt gets bigger, and it will get bigger (you can only slow it down), the rich man in the corner will get fatter.

The controls will be frantic and fun. The player must click quickly to get all the workers to dig but must also click where the diggers will dig. This must be done fast since productivity will drop while the player isn't digging (clicking). If the productivity is too low all the workers are laid off. If the player manages to balance the debt long enough the diggers will eventually reach China.

BailOut is a short but difficult game meant for gamers and non-gamers who enjoy political satire.
